

EZ Print Reflecto

Advantages of EZ Print Reflecto

- Reflects back towards the source of light
- Excellent for any safety printing
- Easy to print through 86 and 110 mesh
- Great selection of stock colors including metallics, fluorescents and standard colors

Recommendations

- May be printed on light, medium and dark T-shirt fabrics (no jackets or bags)
- May be used as a hot split transfer on T-shirt fabrics and nylon material (with use of fine adhesive powder)
- Transfer paper must be uncoated for a true hot split transfer. The uncoated side of cold peel paper is ideal.
- For best results, stir before each use

Screen Mesh

- Use 86 to 110 monofilament mesh count for manual and automatic presses

Squeegees

- 70 to 90 durometer is recommended.
- Angle and pressure may vary results dramatically

Important note:

• **Always perform a pretest print and test cure conditions on the fabric to be printed to establish the best results.** Stir inks vigorously before each use. Viscosity may need adjusting for best results. If there is ever a question about a print job, call us at 1-800-942-4447. We are always happy to help!

Flashing

- Flashing is not recommended.

Curing

- The entire ink film must reach 320 degrees fahrenheit. Every conveyor dryer will accomplish this task differently. Remember, ink curing is a time and temperature process.

Reducers

- EZ Print Reflecto is formulated ready-to-use. Adding reducers will negatively effect the reflection capabilities of this ink. Always pretest when adding any products to the ink.

Clean-Up

- OSI Screen Wash, Citrus Green, Orange Power Plus, or PW4.

Packaging

- 1/2 pint, pints, quarts, 1 gallon pails, 5 gallon pails, 30 gallon drums and 55 gallon drums
